

What's New in Karbexa

We've been hard at work making your experience smoother, smarter, and more enjoyable. Here's a quick tour of the biggest updates!

Light & Dark Mode – Your Choice

You can now switch between **Light**, **Dark**, or **System** themes. The interface adapts to your preference – great for late-night work or bright offices.

A More Consistent Look & Feel

Every screen now shares the same clean design. Buttons, tables, forms, and pop-ups behave predictably, so you'll always know where to click. The whole platform just *feels* more polished.

Faster, More Reliable Performance

We've streamlined background processes and reduced loading times. Pages open quicker, and you'll notice fewer interruptions – especially during busy hours.

Many Small Fixes – Big Impact

We've tackled dozens of minor glitches that you may have noticed over time:

- **Navigation** is now rock-solid – no more disappearing sidebars.
- **Data in tables** updates correctly across all sections.
- **Forms** and **modals** work consistently, with clear error messages.
- **Notifications** arrive on time and stay reliable.

In short: the platform is more stable, and you can focus on your work without worrying about the tool.

What's Next?

We're already working on even better **expense management, timesheets**, and a **revamped settings** page. Stay tuned!

We appreciate your feedback – keep it coming!
